DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1 and 6, 8-9 are rejected under 35 U.S.C. 102(e) as being anticipated by Murade (6297862). See figure 6, top layer 14 for the upper light shielding layer. Note that this layer is mislabeled, it should have been labeled as 7.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 7-9 (with respect to claim 1) rejected under 35 U.S.C. 103(a) as being unpatentable over Rho et al. (6057896). Rho discloses a TFT (20, 50, 60, 71, 72) an upper shielding layer (110). Lacking is the lower shielding layer. However, forming the gate electrode 20 from a light shielding material such as aluminum was common knowledge in order to prevent the TFT from degrading due to light. Furthermore the examiner is taking official notice of that fact. Accordingly it would have been obvious to one of ordinary skill.

Note that claims 8-9 are product by process limitations and are given limited patentable weight. See MPEP 2100.

Allowable Subject Matter

Claims 2-5 are allowed.
